Step-by-Step Guide to Using Leher Drones for Pesticide Spraying

There is no denying that the traditional method of spraying pesticides is more challenging. It exposes farmers to dangerous chemicals, as well as takes many hours to complete the task.

But what if you could cover an entire field in minutes, without setting foot on it? Here's where Leher's agriculture drone spraying is helpful!

Drone operation is much simpler than you would imagine. Let's look at simple ways by which you can use Leher's agricultural drones for pesticide spraying more effectively!

Book Your Drone

Schedule a drone spraying service with Leher. You can choose between options based on your field size or the pesticide you want to use. Leher will also assist you in selecting the best Kisan drone for you.

Prepare Your Field

Remove any stones or sticks from the farm before the drone comes. Make sure your pesticide is ready for mixing. If unsure, the drone operator will also assist you with pesticide dilution.

Meet the Operator

Leher will send an experienced drone pilot to your farm on the scheduled date. There is no need to worry about crashes or flying mistakes since they are qualified experts. The team will check the field & weather forecast before takeoff.

Load the Pesticide

The drone has a tank, which typically holds 10-40 litres that can be filled with your pesticide. Drones have a smart spray system that minimises wastage by providing precise coverage. This ensures that your crops get the right amount of pesticides.

Let the Drone Do Its Magic

After all the necessary preparations are made, the drone takes off according to a pre-programmed flight path. You won't believe how easily it covers a lot of ground in a short amount of time.

The GPS mapping ensures that the drone doesn't overlook any areas. It can also sense the density of crops & change its spray rate accordingly. All you have to do is take a look.

Post-Spraying Check

The drone operator will land the drone to provide a detailed report after the spraying. You'll get valuable information like the amount of pesticide used & the area covered.

Why Farmers Love Leher Drones?

- It saves a lot of time & labour effort.
- Help farmers reduce their exposure to harmful chemicals.
- It offers more precise & efficient spraying.
- More affordable choice for every farmer.
- It is easily scalable for any farm size.

The Final Thoughts

Leher is transforming the way farmers manage crop care. Drone spraying is an efficient way to enhance crop health while reducing labour costs. Rent a Leher drone to spray pesticides more easily without much effort!
